WORK EXPERIENCE

Software Engineering Internship

2025

.NET · C# · Postman · Azure · CI/CD · Microservices · Test Automation

Hexagon ALI

- Collaborated in an agile development environment across sprint-based workflows and team deliverables.
- Created a hook health-check test for an event-driven system, isolating hook failures before pipeline execution and reducing false failure signals in Azure DevOps.
- Refactored the test object creation infrastructure, improving maintainability and making test setup more efficient and consistent.
- Established a role-based testing infrastructure from scratch, including end-to-end permission tests validated against a file-based truth table for all system roles.

PROJECTS

Meet Shahaf - AI Interview Agent

2026

Python · React · FastAPI · SQLite · WebSockets · Three.js · OpenAI Realtime API

[View Demo](#)

- Deployed a full-stack application with a React frontend (Three.js 3D avatar) and a FastAPI backend serving as a WebSocket proxy.
- Built an AI voice agent with a 3D avatar that represents me in recruiter interviews.
- Implemented a real-time audio pipeline using OpenAI Realtime API over WebSockets — one continuous stream.
- Engineered a context-aware system prompt that adapts responses based on the recruiter's uploaded job description.

EscapeCode - Coding Puzzle Game

2024–2025

Unity · C# · 3D Game · Eye Tracking · OpenAI API · Google Speech-To-Text API

[View Demo](#)

- Engineered a 3D desktop puzzle and escape room game for learning and practicing coding concepts through gameplay.
- Created a top-down game flow where players solve escape room puzzles and complete coding tasks to progress.
- Added accessibility features to support hands-free interaction and code writing.
- Embedded an in-game AI assistant that helps players solve coding tasks and insert generated code into the editor.

Facebook Data Collection Automation

2023–2024

Python · JS · Selenium · BeautifulSoup · Automation · Flask · Redis · PostgreSQL · Docker

[View Demo](#)

- Automated an end-to-end workflow for collecting, organizing, and exporting Facebook group post data in a structured format.
- Developed a user-facing web interface and backend services for configuring collection parameters, monitoring execution in real time, and exporting CSV results.
- Implemented backend job queue and run-state management to support safe handling of multiple collection requests.
- Integrated persistent run history and structured storage to improve reliability and system scalability.

EDUCATION

B.Sc. in Software Engineering

2021–2025

ORT Braude College — GPA: 85

SKILLS

Programming

Python, C, C#, Java, Javascript, HTML, CSS, Yaml, Sql

Frameworks

Flask, FastAPI, React JS, Tailwind CSS, .NET, Node.js, Three.js

Tools & Platforms

Docker, Postman, Selenium, BeautifulSoup, Azure, Git, CI/CD, Redis
Rest Api, WebSockets, PostgreSQL, SQLite Unity

Languages

Hebrew (native), English (fluent)
